

F&B SOLUTIONS. SIHOT.POS

“Any sufficiently advanced technology is indistinguishable from magic.” (A. C. Clarke)

Exciting Technology

Our PC-cashiering system SIHOT.POS is easy to use and to install, with only few hardware specification requirements. It is highly flexible and therefore offers the right solution for any establishment, be it bar, coffee shop or gourmet restaurant.

Robust, Secure, Economical

Pressure and stress are part of every day work. Our software solutions optimise your workflow and leave you with more time to look after your guests. We have combined proven functionalities of the F & B cash register with the advantages of a 32-bit Windows application on a touch screen.

High data security is provided by using the most advanced technology. Minimal maintenance, marginal training needs, easy updating of items and master data all enhance your investment. SIHOT.PMS and SIHOT.POS are perfectly matched.

Effortless Handling

Design and structure of the screen may be arranged according to your own requirements. The use of the touch screen is easy and self-explanatory. Many functions may be carried out by drag & drop.

Orders are processed swiftly by using set keys, which are displayed to the user in main- and sub-groups. The use of combination items like banqueting packages makes the system even faster to use.

The order printed out at the counter or in the kitchen is well laid out, with added comments according to the guest's specifications.

"The bill, please"

Handy table functions make service a pleasure – for guest and waiter. Table lists, "happy hour", foreign currency, invoice splitting or combination as per request, table handover at the end of a shift: SIHOT.POS is capable of handling it all and promotes smooth and customer-orientated service.

After the last guest has left, the system keeps on working for you: revenue, payments, invoices and master profiles may be analysed directly at the back-office station.

State-of-the-Art

The in-house guest list is taken directly from SIHOT.PMS and is always up to date. Thus, information such as meal plans, VIP-status, and credit limit are available anytime. The innovative software of SIHOT.POS also features a posting facility for management accounts. Furthermore, services may be posted directly to the respective banqueting function; pay-masters or pseudo-rooms are no longer required.

Mobile Order Terminals

For a wireless connection to SIHOT.POS, we recommend the "Orderman" handheld terminals. An excellent way to improve service – especially in places with high service demand and seasonal traffic. This flexible tool with touch screen and touch pen is ideal for taking orders by tip or in writing. No larger than a notepad, shock- and splash-resistant, the "Orderman" fits into any service team.

Your Advantages at a Glance

- >> efficient working with modern touch-screen technology
- >> flexible arrangement of groupings according to your needs
- >> competent invoicing
- >> expandable with "Orderman" and different interfaces
