

MANAGING GIFT CERTIFICATES WITH SIHOT.PMS

One less problem!

What's In A Voucher?

Whether you are power-selling via Ebay or issuing gift vouchers for hotel services – certificates can provide a significant boon to your business. This module enables you to generate, monitor and track certificates effectively and accurately. Additionally, all transactions are processed as required by law.

The Sale

In most countries, selling a certificate is subject to government taxes. Therefore, SIHOT generates an invoice at the time of the sale. At the same time, the certificate is printed, using your own individual layouts. Payments rendered and services provided are immediately posted and recorded. Tiresome manual procedures are completely eliminated.

Redemption

To redeem a certificate, simply enter the gift certificate number. The settlement is processed automatically on the certificate account and transferred to Accounts during the night run. Duplicate redemption is prevented by using the certificate number. The function "block certificate" is another useful safety feature, e.g. in case of a lost certificate.

Tracking

A special dialog provides an overview over each and every certificate issued. The sorting mechanisms help you to track the open certificates or to monitor certificates issued during a certain period. Of course, it is important to identify those clients who actually buy the certificates and include them in targeted marketing activities. SIHOT supplies detailed overviews for this purpose.

Your Advantages at a Glance

- >> complete overview of all gift certificates
- >> issue, print and redeem gift certificates in one module
